ADMINISTRATIVE CONSENT ORDER
FRESHWATER WETLANDS PROTECTION ACT

TAKE NOTICE THAT THE DEPARTMENT OF ENVIRONMENTAL PROTECTION intends to execute an Administrative Consent Order to settle enforcement claims as to specific violations of the FRESHWATER WETLANDS PROTECTION ACT, N.J.S.A. 13.9B-1 et seq., and the rules promulgated pursuant thereto, N.J.A.C. 7:7A-1 et seq.

IN THE MATTER OF: Ramapo College of New Jersey
SUBJECT PROPERTY: Block 18, Lot 3
Mahwah Township, Bergen County

The proposed Administrative Consent Order requires that Ramapo College treat all stormwater from existing parking lots on its campus in excess of Department requirements prior to discharge to Darlington Brook or its tributaries, provide and deed restrict wetland buffers of 150 feet to the wetlands nearest the tributaries of Darlington Brook upstream of the current development project and permanently preserve the northern most wetland / upland complex as open space to serve as habitat for wood turtles. In certain other areas the proposed Administrative Consent Order provides for reduced wetland buffers, but in no case less than 20 feet. Ramapo College is constructing dormitory buildings outside of certain of these reduced buffer areas. In addition the proposed Administrative Consent Order requires that Ramapo College fund and participate in a Wood Turtle Study Plan and upon Department approval of the completed Study, participate in the development and implementation of a Wood Turtle Management Plan. Ramapo College will also be required to pay a penalty settlement of \$37,350. Based on compliance with this Administrative Consent Order, Ramapo College may engage in certain specified construction activities enumerated in paragraph 32 of the Order. Subject to this Administrative Consent Order becoming effective, the Department also anticipates issuing to Ramapo College a freshwater wetlands general permit 10 for the construction of three road crossings and a freshwater wetlands general permit 11 for the construction of five stormwater outfall structures.

Approximately 0.0687 million gallons per day of wastewater from various processes is being discharged to the Landis Sewerage Authority's wastewater treatment plant (LSA). The wastewater is pretreated prior to discharge. The pretreatment system consists of roto screens, equalization, acidification, flocculation, and dissolved air flotation processes. A New Jersey Pollutant Discharge Elimination System/Significant Indirect User (NJPDES/SIU) Permit Number NJ0101206 was issued on January 29, 2002 for the said discharge to LSA. The permittee, with LSA's consent, has requested an increase in effluent limitations for BOD ₅ and TSS. Only the changes proposed in this draft document are open for comment. All other conditions of the existing permit shall remain in full effect. Comment period ends 30 days after publication in the Daily Journal.
Cape May County MUA Secure Sanitary Landfill NJPDES Permit No. NJ0085952 SIU	Route 610 Woodbine, NJ 08270 Cape May County	Gary Torres Bureau of Pretreatment and Residuals (609) 633-3823	Cape May County Municipal Utilities Authority Seven Mile Beach and Ocean City Sewage Treatment Plants	This application is for a renewal of a NJPDES permit to discharge an average of 0.026 MGD of untreated landfill leachate. Discharge originates from a 93 acre sanitary landfill on a 319 acre site. Approximately 26,000 gallons daily of leachate formed by stormwater percolating through the solid waste in the landfill is accumulated in two above-ground storage tanks, each of 0.75 million gallon capacity. Stored leachate is trucked to sewage treatment facilities, where further treatment occurs. Submitted to <i>Atlantic City Press</i> for newspaper publication.

Due to a decrease in leachate volume to about 720 gallons daily, the Department has tentatively determined that the permittee has no reasonable potential for adversely affecting the local agency's operations or for violating any Federal, State, or local pretreatment standards or requirements and is therefore not a significant indirect user. Therefore, continued discharge to Willingboro MUA is proposed to be allowed without the permit, which is proposed to be revoked.</p> <p>Submitted to Burlington County Times for newspaper publication.</p>

The facility's influent water source consists of water drawn from the Musconetcong River (approximately 2.3 MGD) and well water from 2 onsite wells (approximately 1.51 MGD).</p> <p>The existing permit contains two storm water outfalls; DSN002A and DSN003A. Outfall DSN002A discharges approximately 0.005 MGD of storm water run-off from roof drains. Outfall DSN003A discharges approximately 0.005 MGD of storm water run-off from the converting departments roof drains. The renewal application requested the addition of three new storm water outfalls; DSN006A, DSN007A, and DSN008A. DSN006A discharges approximately 0.06 MGD of storm water run-off from a concrete trench. Outfall DSN007A discharges approximately 0.001 MGD of storm water run-off from the trench north of the river. DSN008A discharges approximately 0.001 MGD of storm water run-off from the warehouse roof drains. As per an application received by the Department on July 26, 2001, the above mentioned storm water outfalls will be regulated by the general stormwater permit authorization number NJG0139572. As a result, the Department has proposed the removal of outfalls DSN002A and DSN003A from the existing NJPDES/DSW permit.</p> <p>As per a letter from Victor Camporine, Environmental Manager for Fibermark Inc., dated June 18, 2001 and received by the Department on June 19, 2001, the permittee has diverted the non-contact cooling water and storm water from DSN005A to the treatment system of outfall DSN001A, thus eliminating outfall DSN005A. Therefore, limitation and monitoring conditions for DSN005A have been removed from the permit as there is no further discharge from DSN005A.</p> <p>Outfall DSN001A will discharge an average of 1.434 MGD (1.22 MGD from DSN001A plus 0.214 MGD from DSN005A) of treated processed wastewater (including non-contact cooling water and storm water) from the papermaking process and class II landfill leachate. Outfall DSN004A discharges approximately 3.05 MGD of sand filter backwash and overflow, overflow from the settling pond, and storm water run-off from the roof adjacent to the boiler.</p>
